

# For MAC Users having Problems

If you are having problems filling out the fillable pdfs on a Mac, it is probably because you are not using the proper app. Your Mac might be opening the pdf with Safari or with its "Preview" app by default. These allow you to view the pdf but not to fill it out. Or sometimes the text appears sideways.

You need Adobe Acrobat Reader DC. It may already be on your computer, but if not, here's info on how to install, and a link for the download. <https://helpx.adobe.com/acrobat/kb/install-reader-dc-mac-os.html>

And once you have it installed, or if it's already there, you should make it your default app for opening pdf files. Here's how to do that: <https://www.adobe.com/acrobat/hub/how-to-change-your-default-pdf-viewer.html>

Once you do this, you should have no problem filling out the pdf forms.

Hope this helps!!
